DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 7 rejected under 35 U.S.C. 102(b) as being anticipated by Takaba et al. (USPN 5,565,856).

Takaba et al. (USPN 5,565,856) teaches the limitations of Claim 1 as follows; an abnormality detection device for detecting an abnormality in a communication bus, the device comprising of

a timer counter measuring a time during which a signal is transmitted through said communications bus continues to be a first logical level (825; See Figure 9 , 945; Figure 24 & (Col. 7 & 8, lines 64-67 & 1-24) and

a comparator comparing the time measured by said timer counter with a threshold value and outputting an abnormality detection signal indicating an abnormality in said communication bus when the time surpasses said threshold value (Col. 7, lines 30-50)

Claim 5 has all the limitations of claim one with the addition of an additional timer (Col. 1, lines 50-56) and a register for adding the time measured by one of the timers (Col. 7, line 40-45)

Art Unit: 2863

With regards to Claim 7, Takaba et al. (USPN 5,565,856) teaches a microcomputer connected to a bus comprising of a timer to measure a transmission time in a communications bus and a comparator to compare the time measure to a threshold value (120; See Figure 1a).

Regarding claims 2-3, Takaba et al. (USPN 5,565,856) teaches initializing the timer and comparator. (See figure 9)

Regarding Claims 4, Takaba et al. (USPN 5,565,856) teaches plurality of registers and a means for selecting values stored in those registers. (1020; Figure 11)

Allowable Subject Matter

Claim 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Response to Arguments

2. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

During patent examination, the pending claims must be "given the broadest reasonable interpretation consistent with the specification." Applicant always has the opportunity to amend the claims during prosecution, and broad interpretation by the examiner reduces the possibility that the claim, once issued, will be interpreted more

Art Unit: 2863

broadly than is justified. In re Prater, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-51 (CCPA 1969).

While the meaning of claims of issued patents are interpreted in light of the specification, prosecution history, prior art and other claims, this is not the mode of claim interpretation to be applied during examination. During examination, the claims must be interpreted as broadly as their terms reasonably allowed. This means that the words of the claim must be given their plain meaning unless applicant has provided a clear definition in the specification. In re Zletz, 893 F.2d 319, 321, 13 USPQ2d 1320, 1322 (Fed. Cir. 1989).
